We are on a mission to redefine the future of anesthesiology and intensive care, making it safer, more efficient, and more connected than ever before. Backed by the credibility and expertise of a French medical society gathering experts in anesthesiology and intensive care. We are introducing a groundbreaking initiative at the intersection of healthcare and technology. Together with the French government, we envision to become the best worldwide actor with the Center of Excellence in France.

## **Problem Statement & Opportunities**

In the current healthcare landscape, patients often struggle with stressful medication regimes and complex instructions prior to surgery. Errors or non-compliance can lead to surgery cancellations, causing distress for the patient, financial loss for the hospital, and delays for other patients. Hospitals also deal with scattered data and static risk assessment methods that do not cater to individual patient needs.

## **Solution**

Our comprehensive solution includes a smart watch certified for medical usage to monitor patients' health and provide timely reminders for medication intake and appointments. We also offer an innovative intelligent questionnaire, powered by a decade's worth of highly qualified data and information. This questionnaire adjusts in real-time based on the input and current medical regulations, providing a dynamic and personalized approach to assessing patient health and surgical risks. It also helps predict post-surgery recovery time, aiding in efficient hospital bed management. Our API centralizes data, ensuring compliance with HIPPA and French Medical Data regulations and preventing scattered information in hospitals. We ensure vendor freedom, making our solution available to anyone in France or around the world

## Product/Service Overview

Our product is a unique blend of smart watch technology, AI, and a decade's worth of carefully tagged and qualified data. Our SaaS API applications provides real-time health monitoring, personalized medication planning, and dynamic risk assessment through an intelligent questionnaire. This questionnaire adjusts based on the input and current regulations, providing a personalized and up-to-date assessment of surgical risks and post-surgery recovery times. Our system drastically cuts down configuration time, facilitating seamless integration in various hospital systems. We are already in production in many sites, demonstrating the practical viability and efficiency of our solution.

## Management team & contacts

- **Dr. Vincent COLLANGE, CEO**  
Anesthesiologist-intensive care specialist
- **Karim AOUADI, General Manager,**  
Chief Technical Officer
